RAM 512

by Connor Freff Cochran, Randy Lee, and Erik Norlander

WHAT IT IS

We could tell you that the RAM 512 is a battery-backed PCMCIA SRAM card, but that's just technical mumbo-jumbo (see box below). In practical fact, the easiest way to think of this card is as 512K of programmable expansion memory for your Alesis keyboard or module. Key word: programmable. That's where the real power lies.

All Alesis QS series synths have the same basic "architecture" of Programs and Mixes. Programs are stored in banks of 128 Programs each. Mixes (which are combinations of Programs) come in sets of 100. With your RAM 512 card you can carry up to 8 separate sets of banks and Mixes to play from your Alesis QS6, QS7, QS8, QSR, Quadrasynth, S4, Quadrasynth Plus Piano, or S4 Plus.

In addition, using the Alesis SoundBridge software, you can store samples and sequences on the RAM 512 card for instant playback through your keyboard or module (Quadrasynth Plus Piano, S4 Plus, QS6, QS7, QS8 and QSR only – this feature is not supported on the original QuadraSynth and S4).

We've gone ahead and installed 1,024 programs and 800 mixes onto the card, to get you started. But there's a lot more you can do with the card than just carry around these freebies! Read on and see.

NOTE: Although you can use the RAM 512 to store digital samples, it doesn't come from the factory with any sample data. All that we have installed is program data designed around the QS series sound ROM. If you want to expand the sound ROM of your Alesis synth, contact your dealer and check out the Alesis series of QCards. Each of these expansion cards contains 8 megabytes of new samples plus programs and mixes designed to take full advantage of them.

Defining our terms...

BATTERY-BACKED: This means the card has a tiny built-in battery which supplies power to the card's memory. The estimated life of this battery is approximately five years from the time the card was first manufactured, so it should be a while before you need to worry about replacing it. (Which, by the way, is easy to do. You'll find the instructions elsewhere in this manual.)

PCMCIA: This has nothing to do with PCM (Pulse Code Modulation) or the CIA (famed of book, film, and Senate hearing). Instead, it stands for the Personal Computer Memory Card International Association — the folks who standardized the format spec for this particular kind of data card.

SRAM: This stands for Static Random Access Memory. It's a special kind of high-speed RAM which can retain stored data for as long as its battery power holds out.

User Notes

WHAT COMES ON IT

Your RAM 512 comes preloaded with eight Expando banks containing Programs and Mixes composed for the QS7, QS8 and QSR (for other Alesis instruments, see the section on Compatibility). That's a total of 1,024 programs and 800 mixes for you to explore and use, organized as follows:

CATEGORY	PROGRAMS	MIXES
Keyboard	128	100
Guitar	128	100
Orchestral	128	100
Synth	128	100
Atmosphere	128	100
Techno	128	100
Drums	128	100
Rhythm	128	100

WHAT COMES WITH IT

Along with your RAM 512 you will find two floppy disks. One disk is in Mac format. The other is in PC format. Their contents are identical.

Here's what they hold:

- The Alesis FreeLoader application for easy SysEx transfers of Program data from your computer to your synth.
- The 8 Expando banks for the QS7, QS8 and QSR that came preloaded on the card.
- 3 QEssence banks for use in the QS6 and NanoSynth.
- 3 Virtual Composer banks for use in the QuadraSynth, S4, QuadraSynth Plus Piano and S4 Plus.
- The factory User bank for the QS6, the factory User bank for the QS7, QS8 and QSR, and the factory User bank for the QuadraSynth Plus Piano and S4 Plus.

COMPATIBILITY

Programs and Mixes aren't sample data. They are just control information that tells your Alesis synth what sample data to go look up in the host instrument's ROM, and how to play it. This makes Programs and Mixes ROM dependent and also makes for occasional compatibility problems because the sound ROM isn't the same in all Alesis instruments.

An example: If you load a program designed for one particular Alesis sound ROM into an Alesis synth with a different ROM, then the results won't necessarily be what you are expecting. That "KillerBass" Program you're trying to play might go looking for the bass sample data and find a flute or a vocal "aaaah" or something even more unlikely in its place!

As a general rule, make sure you match the right banks with the right instruments. (As noted above, the 8 Expando banks that come preloaded on the card are tailored for the QS7, QS8, and QSR. The 3 QEssence banks on the accompanying floppy disk are for the QS6 and the NanoSynth, and the 3 Virtual Composer banks are for use in the QuadraSynth, S4, QuadraSynth Plus Piano and S4 Plus.)

On the other hand there's no harm in deliberately mismatching banks and instruments. You can't hurt anything. And while most of the weird results you get from ROM mismatches will be useless, here and there you might very well find an incredible, coincidental gem. Feel free to experiment if you are curious.

NOTE FOR ORIGINAL QUADRASYNTH AND S4 OWNERS:

Some programs in the banks designed for the later model synths (QS6, QS7, QS8, QSR) can cause these two earlier models to freeze, and the display will read ADDRESS ERROR. This is due to some parameters added in the later models which don't exist in the earlier units. If an address error occurs, reinitialize the unit by holding down Quad buttons 1 and 4 and power cycling the unit. You can of course reload the QuadraSynth Factory User bank or any of the three Virtual Composer banks to purge your unit of the offending program data.

NOTE FOR QS6 OWNERS:

If you have OS 2.00 or higher, you will be able to read the 8 Expando banks (designed for the QS7/QS8/QSR) with generally good results because there is a "lookup table" in the newer software that remaps QS7/QS8/QSR sample ROM to QS6 sample ROM. However, because of the differences in the two sound ROM sets, not all the ROM substitutions will work perfectly.

Here's how to find out which operating system your QS6 uses: Version 1 machines will display their current software level if you hold down PROGRAM and press "00 Piano." Version 2 machines will display their current software level if you hold down PROGRAM and press "0." For information on updating your QS6 to version 2.0, call Alesis Product Support at 1-800-5ALESIS

NOTE FOR QS7, QS8, AND QSR OWNERS:

The QEssence and Virtual Composer banks on the disk will load into these units via MIDI without any trouble due to the "lookup tables" built into their software. But as with the QS6, the differences in the sound ROM sets can cause some Programs to sound differently than they would on the intended unit. Also, most Programs should play correctly but the Mixes may not, as they may make use of Preset Programs from the originating keyboard which do not exist on your unit.

BASICS: PLAYING PROGRAMS FROM THE 8 AVAILABLE BANKS ON RAM 512

ON THE QS6, QS7, QS8, QSR, QUADRASYNTH PLUS PIANO AND S4 PLUS

Make sure PROGRAM has been pressed which puts you in Program mode. Then press either BANK LEFT or BANK RIGHT (BANK UP / BANK DOWN on QSR) until you see the word **CARD** and a **number** appear in the upper line of the LCD display. (Since the QS7, QS8 and QSR have two card slots, on those instruments you'll see either **CardA-#** or **CardB-#** depending on which slot the RAM 512 is in.) Keep on pressing the BANK buttons until you see the bank number (from 1 to 8) that you are looking for. After that, you can select specific programs from that bank in the standard fashion for your particular instrument.

NOTE FOR QS7, QS8, AND QSR OWNERS:

These units allow access to a total of 16 banks, including the User and Preset banks. This means you can access a total of 11 banks (!) from the card slots. This allows quite a bit of power, but it leads to some interesting situations. For instance, if you put a QCard in one slot and a RAM 512 in the other, you'll have no problem accessing all nine banks (one on the Qcard and 8 on RAM 512). However, if you put two RAM 512 cards in, one in each slot, the unit will allow you to see the 8 banks on the first card but only THREE on the second. If you then put an Alesis Ram Card 1 in slot B (the original 4-bank, 256 RAM card), you will only see three of its banks. If you swap them, you'll see all 4 banks in slot A and only 7 of the 8 banks in slot B.

RAM 512

ON THE ORIGINAL QUADRASYNTH OR S4

NOTE: The banks supplied on the RAM 512 cannot be loaded from the card into the original Quadrasynth or S4 due to the additional parameters that are not compatible with the older software. What you will see if you try this is the message NO PROGRAM DATA AT THIS BANK. In order to use the card to save and load banks, you will have to store a bank from the QuadraSynth User bank to each of the eight banks on the card. This formats the card for use with the older instruments.

That being said, there is another issue to discuss: namely, the older circuitboards on these instruments can't play Programs and Mixes directly off the RAM 512. You can, however, work with one bank at a time by downloading it from the reformatted RAM 512 into your instrument's User bank. Once you've done that, press the Program button and spin Quad Knob 3 fully counter-clockwise to switch the Bank Type to the User bank (if necessary), and then call up the individual programs in the standard fashion for your machine.

Details of the downloading process are covered elsewhere, in the section entitled *Saving, Loading, and Moving Data*.

NOTE: Be aware that loading a bank from the card will erase the current contents of your User bank! If there are custom programs of your own in that bank which you want to save, make sure you've saved the bank to your computer (using a SysEx dump) before you download a new User bank from the RAM 512. If you haven't got any custom programs in your User bank, you can skip this step.

BASICS: PLAYING MIXES FROM THE 8 AVAILABLE BANKS ON RAM 512

Exactly as noted above for Programs, except that you press the MIX button first to make sure that your instrument is in Mix mode.

SAVING, LOADING, AND MOVING DATA: HOW TO WORK WITH INDIVIDUAL PROGRAMS, MIXES, BANKS, SOUNDS, AND EDIT BUFFERS

ON THE QS6 (versions 2.0 and higher), QS7, QS8, and QSR

There's a world of useful functions hiding under that innocent-looking STORE button. Let's take them one by one, in the order that they appear going in one direction (as you'll see, they eventually loop back around to where we'll start).

User Notes

NOTE: The QSR uses a CURSOR LEFT/RIGHT button in place of the keyboards' PAGE LEFT/RIGHT buttons, and a data wheel in place of a data slider or numeric keys. Please keep that in mind as you read the following:

Saving the current Program (or Mix) to a slot in the User bank or one of the RAM 512 banks

Make sure that the specific Program (or Mix) you'd like to save is selected. Then press STORE. The display will read:

SavePrg? (STORE)
to USER ###

Look carefully in the display and you will see an underline beneath the first digit in the number on the right. If you press PAGE LEFT once you'll see it shift left to the capital U in USER. (Don't press twice! That will take you on to the next function.) This is the parameter you edit to select a card bank. The location of the underline tells you which parameter you're editing — the bank you wish to write the current program to, or the program number in that bank.

To set things, place the cursor on the parameter you wish to edit and then use the data slider, the UP and DOWN value keys, or the numerical keys to make your selection. (You can also use the BANK keys as a shortcut way to select the bank while the cursor is under the program number parameter.) When you've got things set where you want, press STORE again to complete the save.

You can quit at anytime, without changing things, by pressing either PROGRAM or MIX.

Loading a Bank from the RAM 512 into your instrument's User bank

Press STORE and then press PAGE LEFT twice (or PAGE RIGHT twelve times). The display will read:

LOAD FRM CARD #?
(Press STORE)

Use any of the standard methods to select the bank number that you'd like to place in your instrument's User bank. Press STORE again to complete the procedure.

Saving a User bank to the RAM 512

Press STORE and then press PAGE LEFT *three times* (or PAGE RIGHT eleven times). The display will read:

SAVE TO CARD #?
(Press STORE)

Use any of the standard methods to select the bank number that you'd like to store your instrument's User bank to. Press STORE again to complete the procedure.

Copying a Mix or a Mix Edit buffer from the current bank directly over to a sequencer or another instrument (or that instrument's edit buffer) via MIDI

Press STORE and then press PAGE LEFT *four times* (or PAGE RIGHT ten times). The display will read:

MIDI MIX ## TO
MIX ###? (STORE)

Notice that cursor in the lower line of the display? If you press PAGE LEFT again it will shift to the first digit in the number in the upper line. (Be careful not to press twice; that will jump you on to the next function.) Here you are once again using the PAGE buttons to select between two parameters you might want to change.

The range of possible selections, for both parameters, is 00-99 and EDIT. Select your source, select your destination, press STORE again...and that data is transmitted from your instrument's MIDI OUT jack as a SysEx message that will be picked up by any other Alesis QS series synth it is connected to.

Copying a Program, a Program Edit buffer, or an Edit Mix buffer from the current bank directly over to a sequencer or another instrument (or that instrument's various Program edit buffers) via MIDI

Press STORE and then press PAGE LEFT *six times* (or PAGE LEFT eight times). The display will read:

MIDI PRG ### TO
PRG ###? (STORE)

This works just the same as for Mix transmissions via MIDI, described just above. There is one big difference, though...the number of possible selections for each parameter. There are 145 — programs 000-127, the program edit buffer, and the 16 different Edit Mix buffers associated with the most recently-selected Mix.

Sending ALL data out via MIDI

Press STORE and then press PAGE LEFT *eight times* (or PAGE RIGHT six times). The display will read:

SEND ALL DATA
TO MIDI? (STORE)

If you press STORE again, this transmits the entire User bank out, via MIDI, as a SysEx Dump. This function will be useful, in terms of the RAM 512 card, for moving data from the card into a sequencer or an editor/librarian program. The first step would be to load the bank from the card into the User bank, as described earlier, and then follow up that transfer with this SysEx dump.

Copying Sound data to other Sounds within a Program (or other Programs in the User bank)

Press STORE and press PAGE RIGHT *twice* (or PAGE LEFT twelve times). The display will read:

COPY SOUND 1 TO
SOUND 2 (STORE)

Like several others we've seen, this is a two parameter display — the cursor can be shifted between the upper and lower lines of the display. Be aware, however, that the range of possible selections in the lower line will vary depending on what you've selected in the upper one.

The upper selection is the source you'd like to copy. The possible range here is Sounds 1-4 and PROG 000-127. Sounds 1-4 refer to the four layers of the Program that was active before you pressed STORE and PAGE RIGHT to get here.

The lower selection is the place you'd like to copy your source selection to. If you've picked one of the Sounds in the upper line, then your range of possible settings for a destination parameter is any Sound in the current Program (1-4) and any Program in the User bank (from 000-127). If you've picked PROG 000-127 in the upper line, then all you can select in the lower line are Sounds 1-4. In this case, after you select a Sound on the lower line, pressing STORE again will cause your unit to copy the same numbered Sound from the designated source Program into the Edit buffer.

When things are as you'd like them to be, press STORE to complete the procedure.

NOTE: When copying a Sound from one program to another, you will automatically overwrite the Sound that is currently in the same position. (Sound 1 from the Edit

RAM 512

buffer to Sound 1 in Program 087, for example.) You can't copy a Sound from one Program to another and change that Sound's numbering at the same time. However, if you know the number of the target Program's available Sound, you can take advantage of the Edit buffer's impermanence by copying Sound 1 to Sound 4, for example, and then copying Sound 4 to Program 087. This will of course overwrite whatever resides in Sound 4 in the Edit buffer at the time.

ON THE QS6 (versions 1.10 and earlier)

You'll find that the functions work in the same fashion, though in a slightly different order (due to additional functions in the later QS6, QS7, and QS8 software). Just be certain before you press STORE that second time that we're on the same "page."

ON THE QUADRASYNTH PLUS PIANO AND S4 PLUS

Here, too, the functions largely work as described above. The main difference is in displays with two parameters, both can be controlled independently using the CONTROLLER A and B knobs.

ON THE ORIGINAL QUADRASYNTH OR S4

Since the original QuadraSynth and S4 aren't capable of playing Programs and Mixes directly from the RAM 512, you will need to download whatever bank you wish to play into your instrument's User bank, erasing the User bank that is currently there. Here are instructions for doing so (and for loading a User bank into a RAM 512 card, as well).

To load a RAM 512 bank into the User bank of your QuadraSynth or S4

1. Make sure the card's label is facing up, and insert the card firmly into the card slot until you feel it seat itself firmly inside the port.
2. Press STORE.
3. Press PAGE LEFT once (or PAGE RIGHT six times). The display should read:

LOAD FROM CARD #?

3. Use the VALUE UP/DOWN keys to select the RAM 512 bank which you would like to load into your User bank.
4. Press STORE a second time. The display will briefly show the message LOADING FROM CARD...and then return to normal operation.

User Notes

NOTE: The Program or Mix you were playing before the loading operation will remain playable until you call up a different User Program or Mix. Why? Because that Program or Mix is playing from the edit buffers, which are unaffected by a RAM 512 card load.

NOTE: To access all of the banks on a RAM 512, you will have to go through the above steps eight separate times.

To save a User bank from your QuadraSynth or S4 to a RAM 512 bank

1. Make sure the RAM 512 card is firmly in place.
2. Press STORE once. Do not press it more than once or you may accidentally write over one of your User Programs or Mixes.
3. Press PAGE LEFT twice (or PAGE RIGHT five times). The display should read:

SAVE TO CARD #?

4. Use the VALUE UP/DOWN keys to select the RAM 512 card bank you'd like to load your instrument's User bank into.
5. Press STORE a second time.

USING RAM 512 AND FREELOADER

The Alesis FreeLoader program (available on the floppy disks that come with the RAM 512, and also on the Alesis QS Series CD-ROM) comes with its own help file and online manual. Our purpose here isn't to teach you how the program works, but just to cover some of the basics of what it can do and why you might be interested in using it with your RAM 512 card.

The part of the program that you will find most useful is its ability to transfer Program and Mix data from your computer into the User bank of your Alesis synth. (The PC version can also receive Program and Mix data back the other way, from your synth to your PC.) With this capability you can keep any number of nifty banks stored away on computer, then load up to 8 of them into your RAM 512 card for portable access on stage or in the studio.

It's a two-step process: (1) Transfer the bank data from the PC to your Alesis synth, using FreeLoader (2) Transfer the bank data from your Alesis synth into the RAM 512 card itself, using the STORAGE functions described earlier.

RAM 512

USING THE RAM 512 AND SOUNDBRIDGE (Quadrasynt Plus Piano, S4 Plus, QS6, QS7, QS8, and QSR only)

SoundBridge is another Alesis program that you can find on the QS Series CD-ROM. It is a Macintosh® and Windows® utility that can be used to compile custom samples, sequences and a single Program bank from multiple sources into the QS Voice format, and then download that data onto a RAM 512 card via MIDI dump to your Alesis synth (in essence, turning your instrument temporarily into a RAM card burner).

Full instructions and online help for SoundBridge are included with the program which is included on the QS Series CD ROM and also appears on the Alesis web site at <http://www.alesis.com>.

For live performers in particular, the SoundBridge/RAM 512 combination should prove powerfully useful. Imagine having all the programs, sounds and sequences you need for a gig — including original samples — available instantly from a single card with everything on it arranged exactly the way you want.

*NOTE: The critical thing you will need to remember is that a RAM 512 card can be formatted to work as **either** a SoundBridge storage card **or** an 8-bank Program card, but not as both. The big differences are (1) you can't put sequences or sample data on an 8-bank Program card, and (2) you are limited to having a single bank of Programs and Mixes on a SoundBridge storage card. (If you want to, however, you can always "unformat" a RAM 512 SoundBridge storage card with the program's ERASE CARD command and use it as it shipped from the factory formatted for multiple bank storage.)*

User Notes

SOME POSSIBLE APPLICATIONS FOR THE RAM 512 CARD

- Portable access for up to 8 banks of Programs and Mixes. (To play Programs or Mixes from the RAM 512 in this scenario, you would first load the bank into your synth's onboard User bank.) Useful for Quadrasynt and S4 owners, or owners of the rest for whom units are provided while on the road (it happens).
- Create custom Mixes quickly by replacing programs inside a Mix with any program from the card's eight banks.
- Save your own custom Programs and Mixes to the card after you have created them on your synth.
- Save your own custom Programs and Mixes to the card after you have created them on your computer (downloading first from the computer to the synth, and then from the synth to the card). There is room for 1,024 programs and 800 mixes on the card.
- Transfer any of the numerous banks supplied on floppy disk to the card for portable access later. This is useful in two ways. First, it's good to have a backup. If you accidentally wipe out the original User bank that came from the factory without having saved it first, this is one way to get it back. Second, all those extra banks are great raw material to creatively tweak and edit into entirely new Programs and Mixes of your own design, and with the RAM 512 you can have these personal creations available at any time.
- Use the card to carry an entire session or show's worth of sequences all set up and ready to go. (To do this you will need a computer and the SoundBridge program that comes on the CD ROM that Alesis ships with all its synths.) 512K is equal to roughly 100,000 MIDI events. Considering that a MIDI version of the full orchestral score of Beethoven's Ninth Symphony is only around 70,000 events, that should be enough to get you started!
- Use the card to carry up to 512K of special samples selected for your own specific needs. Want to have the perfect Godzilla roar at the climax of your tune? Or your own trademark snare hit? Or a backing "ahhhh" in your own voice? No problem. Just make or get hold of a good sample that's smaller than 512K, then use the SoundBridge program and your synth to burn it onto the card, ready to play.
- Use the card to carry and play combinations of samples, sequences and programs. With this approach you can have every special thing you want available for immediate access. (The one limitation of this combined mode is that it limits you to only one Program/Mix bank on the card.)

Write Protection Switch

To prevent the accidental overwriting of data on the RAM CARD, set the Write Protect Switch on the top edge of the card to ON as illustrated:

The Write Protect Switch is like a write protect tab on a floppy disk. Set the switch to the position you want:

1. **WP** prevents the synth from writing to the RAM CARD.
2. Pushing the switch toward **LOCK** allows the synth to write to the RAM CARD. But don't get confused. The "LOCK" actually holds in the battery. So don't mistake it for **WP** and accidentally overwrite data.

If you attempt a SAVE operation when the Write Protect Switch is in the **WP** position, the screen will briefly display this message:

CARD IS WRITE PROTECTED.

You can LOAD banks from the RAM CARD regardless of the position of the Write Protect Switch.

Battery Replacement

The battery in the RAM CARD has an estimated life of up to five years from the time of original manufacture. If the RAM CARD does not SAVE or LOAD data, and if it is correctly inserted into the unit, then the battery should be replaced immediately with a new 3-volt CR2325 battery. To replace the battery:

1. Unlock the battery:

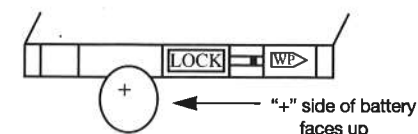

2. Take out the battery cover:

3. Take out the old battery

4. Insert a new 3-volt CR2325 battery into the RAM CARD.

5. Insert the battery cover into the RAM CARD.

6. Relock the battery cover.

Note: It is a wise precaution to make a backup of crucial data onto a floppy disk or other storage medium using System Exclusive files. Alesis cannot be held responsible for any loss of data due to malfunction of the RAM CARD or its battery.

HANDLING AND PRECAUTIONS

- Keep the RAM CARD away from direct sunlight, hot surfaces, magnetic items (such as speakers) and moisture.
- Never poke anything into the pin slots of the RAM CARD.
- Keep the RAM CARD edge free from contaminants which can jam into the receiving pins and prevent good contact.
- Do not force the RAM CARD into the Sound Card slot – make sure it is aligned properly before pushing it in completely.
- Keep the RAM CARD in its protective case when not in use.

ALESIS CORPORATION ("ALESIS") warrants this product to be free of defects in material and workmanship for a period of 90 days from the date of original retail purchase. This warranty is enforceable only by the original retail purchaser.

During the warranty period ALESIS shall, at its sole and absolute option, either repair or replace free of charge any product that proves to be defective on inspection by ALESIS or its authorized service representative. In all cases disputes concerning this warranty shall be resolved as prescribed by law.

To obtain warranty service, the purchaser must first call or write ALESIS at the address and telephone number printed below to obtain a Return Authorization Number and instructions concerning where to return the unit for service. All inquiries must be accompanied by a description of the problem. All authorized returns must be sent to ALESIS or an authorized ALESIS repair facility postage prepaid, insured and properly packaged. Proof of purchase must be presented in the form of a bill of sale, canceled check or some other positive proof that the product is within the warranty period. ALESIS reserves the right to update any unit returned for repair. ALESIS reserves the right to change or improve design of the product at any time without prior notice.

This warranty does not cover claims for damage due to abuse, neglect, alteration, adjustment, modification or attempted repair by unauthorized personnel, and is limited to failures arising during normal use that are due to defects in material or workmanship in the product. This warranty also does not cover loss or damage which occurs in shipment or which is due to improper installation or maintenance, misuse or any cause (including without limitation accidents or acts of God) other than ordinary applications; or improper environment or excessive or inadequate heating or air conditioning or electrical power failures, surges or other irregularities. This warranty also does not cover any battery for the product, and Alesis is not liable for data, which is stored or is to be stored by the product and which is erased or otherwise impaired by any cause whatsoever. Alesis' liability for damages for any cause whatsoever, regardless of the form of action and whether in contract or in tort, shall be limited to the purchase price in effect when the cause of action that is the basis of the claim arose for the product.

ANY IMPLIED WARRANTIES, INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED IN DURATION TO THE LENGTH OF THIS LIMITED WARRANTY. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

IN NO EVENT WILL ALESIS BE LIABLE FOR INCIDENTAL, CONSEQUENTIAL OR OTHER DAMAGES RESULTING FROM THE BREACH OF ANY EXPRESS OR IMPLIED WARRANTY, INCLUDING, AMONG OTHER THINGS, DAMAGE TO PROPERTY, DAMAGE BASED ON INCONVENIENCE OR ON LOSS OF USE OF THE PRODUCT, AND, TO THE EXTENT PERMITTED BY LAW, DAMAGES FOR PERSONAL INJURY. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

This warranty only applies to products sold in the United States of America or Canada. The terms of this warranty and any obligations of Alesis under this warranty shall apply only within the country of sale. Without limiting the foregoing, repairs under this warranty shall be made only by a duly authorized Alesis service representative in the country of sale. For warranty information in all other countries please refer to your local distributor.
